Subject: Call for Literature Submissions Related to Assessment of Well Stimulation Treatments in California

The California Department of Conservation is sending you this email on behalf of the California Council on Science and Technology (CCST) because your interest in the regulation of oil and gas production in California. Pursuant to Senate Bill 4 (Pavley 2013), the California Natural Resources Agency has commissioned CCST to conduct an independent scientific assessment of well stimulation treatments, including hydraulic fracturing, in California.

The purpose of the report is to synthesize and assess the available scientific information associated with well completion treatments in California. The review will survey hydraulic fracturing, matrix acidizing, and acid fracturing as they are applied both onshore and offshore for oil and gas production in the state. Published information will be used to investigate the history and current application of well stimulation treatments, changes in the potential for oil and gas development in California made possible by well stimulation treatments, and evidence of environmental and public health impacts attributable to these technologies.

Interested parties are invited to propose relevant, scientific literature for inclusion in the report. Literature can be submitted in two ways:

1. At http://ccst.us/projects/fracking_public/referenceSB4.php
2. Submissions can be emailed as attachments to CAFRAC@ccst.us. File formats that can be imported into bibliography software such as BibTeX(.bib), EndNote XML (.xml) Research Information Systems (.ris), or Zotero (zotero.sqlite) are preferred.

The deadline for literature submissions is **July 15, 2014**.

In keeping with the Department of Conservation's email privacy policies, this email is sent only as a courtesy on behalf of CCST. For any additional information please contact Laura

Feinstein of CCST at CAFRAC@ccst.us or visit the project website at http://www.ccst.us/projects/fracking_public/SB4.php.
